

LEAVING CERTIFICATE EXAMINATION, 1989

TECHNICAL DRAWING - ORDINARY LEVEL

PAPER II (A) - ENGINEERING APPLICATIONS

200 Marks

THURSDAY 22 JUNE - MORNING 9.30 to 12.30

INSTRUCTIONS

- Answer question 1 and two other questions.
- Drawings and sketches should be in pencil unless otherwise stated.
- Where dimensions are omitted they may be estimated.
- Credit will be given for neat orderly presentation of work.
- Candidates should work on one side of the paper only.
- The Examination Number should be written on each drawing sheet used.
- All dimensions are in millimetres.

1. Details of a BEARING BRACKET are given in Fig. 1 with the parts list tabulated below.

INDEX	PART	REQUIRED
1	Bracket	1
2	Cap	1
3	Bearing	1
4	Bolt	4
5	Nut	4
6	Washer	4

- Make the following drawings of the assembled parts in first or third angle projection.
  - A sectional side elevation on section plane BB.
  - A half front elevation viewed in the direction of arrow X.
- Insert the following on the drawing:
  - Title: BEARING BRACKET.
  - ISO projection symbol.
  - Four leading dimensions.

(100 marks)

FIG. 2  
FIGOR 2

(50 marks)

2. Fig. 2 shows the elevation and incomplete plan of a triangular feed chute.

- Draw the given elevation and complete the plan.
- Draw the surface development of the chute using *aa* as the seam.
- Make a large freehand sketch of a paned down joint.

3. (a) Draw a radial cam with a minimum radius of 30 mm and anti-clockwise rotation to give the following motion to an in-line knife edge follower:-
- 0° - 180° Rise 50 mm with uniform acceleration and retardation.
  - 180° - 270° Dwell
  - 270° - 360° Fall 50 mm with simple harmonic motion.

Include the displacement diagram as part of the solution.

- (b) Fig. 3 shows a machine lever OA, pivoted at O, which moves through an angle of 60°. The rod PR is connected by a pin joint at P and passes through a swivel block Q. Using a line diagram to represent the linkage:

- (i) Plot the locus of point R for the 60° movement from A to B.
- (ii) Draw the profile of a simple machine guard about the mechanism with a minimum clearance of 15 mm. (50 marks)

4. (a) Using the data table below make a fully dimensioned drawing of the machine part in Fig. 4.

1	Screwthread:	Metric 30, Pitch 3.5, Length 30
2	Undercut:	Diameter 20, Length 10
3	Taper:	Length 70, Minimum diameter 30, Maximum diameter 60
4	Shaft:	Diameter 60, Length 20
5	Flange:	Diameter 90, Thickness 15
6	Extension:	Diameter 60, Length 10
7	Hole:	Depth 80, Diameter 20 Countersink 5 x 5

- (b) (i) Identify the engineering mechanism shown in Fig. 5.  
 (ii) Name the parts 1, 2, 3, 4.  
 (iii) Make a neat freehand sketch showing a method by which part A could be driven by part B.

- (c) With the aid of freehand sketches explain any two of the following:

- (i) Boss.
- (ii) Tee groove.
- (iii) Rib.

5. (a) Fig. 6 shows the plan and elevation of a machine link. Draw an *isometric view* of the link on section plane SS and having CC as the nearest edge.

- (b) With the aid of freehand sketches explain the following abbreviations:

- (i) CHAM
- (ii) CH HD
- (iii) CRS
