LEAVING CERTIFICATE EXAMINATION, 2012

BIOLOGY – ORDINARY LEVEL

TUESDAY, 12 JUNE – AFTERNOON, 2.00 – 5.00

Section A
Answer any five questions from this section.
Each question carries 20 marks.
Write your answers in the spaces provided on this examination paper.

Section B
Answer any two questions from this section.
Each question carries 30 marks.
Write your answers in the spaces provided on this examination paper.

Section C
Answer any four questions from this section.
Each question carries 60 marks.
Write your answers in the answer book.

It is recommended that you should spend not more than 30 minutes on Section A and 30 minutes on Section B, leaving 120 minutes for Section C.

You must return this examination paper with your answer book at the end of the examination.
Section A
Answer any five questions.
Write your answers in the spaces provided.

1. A student brings a tuna and sweetcorn sandwich, an apple and a bag of crisps for her lunch.

(a) What food in the student’s lunch is:
   (i) a good source of protein? ________________________________
   (ii) a good source of fat? ________________________________

(b) Vitamins form part of a healthy diet and prevent many disorders.
   (i) Name one water-soluble vitamin. ________________________________
   (ii) Suggest one food in the lunch that contains the water-soluble vitamin you have named.
       ________________________________

(c) Name one structural protein in humans. ________________________________

(d) Give one function of fat in the human body. ________________________________

(e) What term is used to describe all the chemical reactions in the human body? _________________

2. Amoeba is a tiny, one-celled organism.
   This diagram shows the structure of a freshwater Amoeba as seen through a microscope.

(a) Name the parts labelled A, B, C and D.
   A. ________________________________    B. ________________________________
   C. ________________________________    D. ________________________________

(b) State:
    one function of part A. ________________________________
    one function of part C. ________________________________

(c) Give one difference between a plant cell and an amoeba.
3. Indicate whether each of the following statements is true (T) or false (F) by drawing a circle around T or F in each case.

**Example:** DNA is a double helical shape.  
T  F

(a) The base Uracil is found in DNA.  
T  F

(b) Chloroplasts contain DNA.  
T  F

(c) The microscope lenses closest to the stage are the eyepiece lenses.  
T  F

(d) Sodium alginate is used to immobilise enzymes.  
T  F

(e) Plant cell walls are fully permeable.  
T  F

(f) Animal cells do not have membranes.  
T  F

(g) An organ is a group of systems.  
T  F

4. The diagram below represents a transverse section through part of a plant.

(a) Does the diagram represent a root or a stem? ____________________________

(b) The letters A, B, C in the diagram, represent three different tissue types. Match each letter with its correct tissue type in the following list:

Ground tissue. ____________________________

Dermal tissue. ____________________________

Vascular tissue. ____________________________

(c) State a function of vascular tissue. ____________________________

(d) Name the two types of vascular tissue in plants.

1. ____________________________

2. ____________________________
5. Place each term from the following list into Column B to match a description in Column A. The first one has been completed as an example.

List: Pollution; Niche; Recycle; Burning fuel; Conservation; Smell.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
</tr>
</thead>
<tbody>
<tr>
<td>The role of the organism in the habitat.</td>
<td>Niche</td>
</tr>
<tr>
<td>(a) Any harmful addition to the ecosystem.</td>
<td></td>
</tr>
<tr>
<td>(b) A problem associated with waste disposal.</td>
<td></td>
</tr>
<tr>
<td>(c) A way to minimise waste.</td>
<td></td>
</tr>
<tr>
<td>(d) Wise management of an ecosystem.</td>
<td></td>
</tr>
<tr>
<td>(e) A possible cause of pollution.</td>
<td></td>
</tr>
</tbody>
</table>

6. In pea plants the allele for tall (T) is dominant over the allele for dwarf (t). A heterozygous tall plant is crossed with a dwarf plant.

Complete the blank spaces below.

Genotypes of parents (Tt) × (tt)

(a) Possible gametes ( ) ( ) × ( )

(b) Genotypes of offspring ( ) ( )

(c) Phenotypes of offspring --------- ---------
Section B
Answer any two questions.
Write your answers in the spaces provided.
Part (a) carries 6 marks and part (b) carries 24 marks in each question in this section.

7.  (a) (i) Name one disorder of the human breathing system. ____________________________

(ii) Give one possible treatment for the disorder referred to above. __________________________

(b) Answer the following questions about an activity that you carried out to investigate the effect of
exercise on your breathing rate or your pulse rate.

Tick the rate you will refer to.  

<table>
<thead>
<tr>
<th>Breathing Rate</th>
<th>Pulse Rate</th>
</tr>
</thead>
</table>

(i) The investigation starts by measuring the resting rate. How did you measure the resting rate?
__________________________________________________________________________

(ii) After measuring your resting rate, what other steps did you carry out to complete the investigation?
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________

(iii) What was the result of your investigation?
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________

(iv) Does this investigation give the same result for both fit and non-fit people? ______________

(v) Give a reason for your answer.
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________
8. (a) (i) What is an enzyme? _____________________________________________________________
(ii) On what structures in the cytoplasm are enzymes made? _____________________________

(b) Answer the following questions in relation to an investigation that you carried out into the effect of temperature on the rate of activity of an enzyme.

(i) What enzyme did you use? ________________________________________________________
(ii) What substrate did you use? ______________________________________________________
(iii) How did you vary the temperature during the investigation? _____________________________

_____________________________________________________________________________________ 

(iv) How did you measure the rate of enzyme activity? _____________________________

_____________________________________________________________________________________ 

(v) During this investigation pH was kept constant. How did you keep the pH constant?

_____________________________________________________________________________________ 

(vi) What was the result of your investigation?

_____________________________________________________________________________________ 

_____________________________________________________________________________________ 

_____________________________________________________________________________________ 

_____________________________________________________________________________________
9. (a) Give **two** reasons why water is important for all living organisms.

   (i) \__________________________________________________________________________\n
   (ii) \__________________________________________________________________________\n
(b) Answer the following questions in relation to food tests that you carried out as part of your practical work.

   (i) What chemical did you use to test the food for starch? \__________________________________________\n
   (ii) Was heat necessary for this test? \__________________________________________________________________________\n
   (iii) How did you know that starch was present?

   \__________________________________________________________________________\n
   (iv) What control did you use in this test?

   \__________________________________________________________________________

   \__________________________________________________________________________

   (v) Another food was tested for the presence of protein. 

       What solution was used to test for protein?

   \__________________________________________________________________________

   (vi) What was the initial colour of the protein-testing solution before you put it on the food?

   \__________________________________________________________________________

   (vii) Was heat necessary for this test? \__________________________________________________________________________

   (viii) What colour indicated that protein was present in the food?

   \__________________________________________________________________________
Section C
Answer any four questions.
Write your answers in the answer book.

10. (a) Using organisms from the ecosystem you have studied, draw a pyramid of numbers to show at least three feeding levels.

(b) (i) All organisms in an ecosystem are influenced by biotic and abiotic factors. Explain the underlined words.

(ii) Name any two abiotic factors from an ecosystem you have studied and describe how you measured each one.

(iii) Keys may be used to identify animals. Use the following key to identify animals A, B and C. The animals are not drawn to scale.

\[ \text{A: legs, antenna, \textit{Helix}} \]
\[ \text{B: no legs, \textit{Pieris larva}} \]
\[ \text{C: no shell, \textit{Nematode}} \]

1. Animal has a shell………………………………………………………. Helix.
   Animal does not have a shell…………………………………………Go to 2.

2. Animal has legs ……………………………………………………. …Go to 3.
   Animal does not have legs…………………………………………Go to 4.

3. Animal has three pairs of legs………………………………………Triobolium.
   Animal has more than three pairs of legs………………………..Pieris larva.

4. Animal has long rounded body………………………………………Nematode.
   Animal has flat body with two eye spots…………………………Planarian.

(iv) All organisms are adapted to their own habitat.
1. Name one animal from the ecosystem you have studied.
2. Describe one way in which it is adapted to its habitat.

(c) (i) Distinguish between a quantitative and a qualitative survey by writing a sentence about each.

(ii) 1. Name one plant from the ecosystem you have studied.
2. Describe how you carried out a quantitative survey to determine its frequency.

(iii) As a result of pollution, a species of plant disappears from an ecosystem. Suggest two possible effects that the disappearance of this plant might have on the other plants and animals living in the area.
11. (a) (i) In genetics, what is meant by the term *haploid*?
(ii) What is a chromosome?

(b) Read the paragraph below and answer the questions that follow.

The rabbit in the photograph has no pigment in its skin, fur or eyes. This is due to an inherited condition known as albinism. Such animals are unable to produce melanin, a protein pigment that gives colour to the skin, eyes, fur or hair. This condition makes an animal more likely to be preyed upon.

Albinism is caused by genetic mutation. The gene that causes albinism (lack of pigment) is a recessive gene. If an animal has one gene for albinism and one gene for pigmentation, it will have enough genetic information to make pigment and the animal will not have this disorder. However, if both genes are recessive the result is albinism. At least 300 species of animal have albino individuals e.g. rabbits, turtles, squirrels, deer and frogs.

(i) What are the main characteristics of albinism?
(ii) What is meant by the term *recessive* gene?
(iii) What is a mutation?
(iv) Mutations can lead to variation in organisms. Variations that make an organism better adapted to its environment can lead to evolution.

1. What is meant by *evolution*?
2. Name *one* of the scientists who first explained how evolution occurs by natural selection.
3. Give *one* source of evidence for evolution.

(v) People with albinism should always apply a high-factor sunscreen when going outdoors and must avoid strong sunshine. Suggest a reason for these precautions.

(c) (i) Genetic engineering is regularly used in animals, plants and micro-organisms. What is meant by genetic engineering?

(ii) List three of the main procedures used in genetic engineering.

(iii) Give two examples of how genetic engineering is used.
12. (a) (i) Name the two main types of reproduction.
(ii) Explain the term fertilisation.  

(b) The flower is the organ of reproduction in many plants.
(i) What part of the flower produces pollen?
(ii) After fertilisation, what part of the flower becomes the fruit?
(iii) Give two methods of seed dispersal in plants.
(iv) Why is it necessary for plants to disperse their seeds?
(v) What is the advantage of dormancy to seeds?
(vi) Give three conditions necessary for seeds to germinate.

(c) The diagram shows a human sperm cell.

(i) Name the parts labelled A, B and C.
(ii) What is the function of the midpiece of the sperm?
(iii) Name the hormone responsible for sperm production.
(iv) Give one cause of infertility in men.
(v) Explain the term contraception.
(vi) Name two methods of contraception.
13. (a) All organisms may be classified (grouped) into five kingdoms.

(i) Suggest one advantage of classifying organisms.

(ii) Name the kingdom to which bacteria belong.

(iii) Give one example of the economic importance of bacteria.  

(b) (i) Draw a large labelled diagram of a typical bacterial cell.

(ii) Bacteria may be classified by their shape. Name any two bacterial shapes.

(iii) Name the method by which bacteria reproduce.

(iv) What are pathogenic bacteria?

(v) State two factors affecting the growth of bacteria.

(c) The diagram shows part of the fungus Rhizopus.

(i) Name the parts labelled A and B.

(ii) Give two functions of structure B.

(iii) Describe the role of part C in the reproduction of Rhizopus.

(iv) What is meant by saprophytic nutrition?

(v) Give one beneficial use of fungi.
14. Answer any two of the parts (a), (b), (c).

(a) (i) What is meant by \textit{aerobic respiration}?
(ii) Aerobic respiration takes place in two stages.
   1. Where \textit{in a cell} does stage 1 occur?
   2. Where \textit{in a cell} does stage 2 occur?
(iii) Which type of respiration, aerobic or anaerobic, produces more energy?
(iv) In yeast cells, alcohol is produced by fermentation.
    Draw a labelled diagram showing how alcohol may be produced in the laboratory.
    Answer the following questions in relation to the activity:
    1. Name another substance that is produced during the fermentation process.
    2. How would you detect this other substance?
    3. How would you know when fermentation had finished?

(b) (i) In leaf cells, which chemical traps light energy for photosynthesis?
(ii) Water for photosynthesis enters the roots of plants by osmosis.
    What is meant by \textit{osmosis}?
(iii) During photosynthesis water is split into three products.
    1. Name \textit{each} of these \textit{three} products.
    2. Name the stage of photosynthesis during which water molecules are split.
(iv) Carbon dioxide (CO$_2$) is also needed for photosynthesis.
    Where does CO$_2$ enter the leaf?
(v) A market gardener wants to increase the vegetable yield in his greenhouses.
    Suggest two ways he may achieve this.

(c) Tissue culture can be used to grow new tissues in the laboratory.

(i) What is a tissue?
(ii) Name a gas that would be needed for the growth of tissue in the laboratory.
(iii) Why are sterile conditions needed to grow the tissue?
(iv) What type of cell division, mitosis or meiosis, is involved in tissue culture?
(v) What medical term is used to describe the disease caused by uncontrolled mitosis in human cells?
(vi) Give \textit{two} causes of this uncontrolled cell division.
(vii) Draw a labelled diagram to show the normal cell cycle.
(viii) What is the function of meiosis?
15. Answer any two of the parts (a), (b), (c).

(a) The diagram shows a section through human skin.

(i) Name the parts labelled A, B, and C.
(ii) The skin is one of the excretory organs in humans.
    Name one substance excreted by the skin.
(iii) List two other functions of the skin.
(iv) Name another organ of excretion and state one substance it excretes.
(v) What is meant by the term homeostasis?
(vi) The human being is an endotherm. What does this mean?

(b) (i) In relation to plant responses:
    1. What name is given to a plant’s response to light?
    2. Name one growth regulator produced in plants.
    3. Where in a plant are growth regulators produced?
    4. Give one way by which plants can protect themselves from attack.

(ii) In relation to animal responses:
    1. Name the two main parts of the central nervous system in humans.
    2. Messages are carried around the body by neurons (nerve cells).
       Name any two types of neuron.
    3. What name is given to the area where one neuron ends and another begins?
    4. Name the type of chemical that carries messages between two neurons.
    5. What happens to this chemical once the messages have been transmitted?

(c) The diagram shows the human digestive system.
(i) Name the parts labelled A, B and C.
(ii) Explain the term digestion?
(iii) Name one human tooth type and give its function.
(iv) Part C secretes hydrochloric acid onto the ingested food.
    Give one function of this acid.
(v) Give one digestive function of part D.
(vi) Give one digestive function and one non-digestive function of the pancreas.
