Design & Communication Graphics

Ordinary Level Sections B and C (120 marks)

**Thursday, 24 June
Morning, 9:30 - 12:30**

This examination is divided into three sections:

- | | |
|-----------|-------------------------------------|
| SECTION A | (Core - Short Questions) |
| SECTION B | (Core - Long Questions) |
| SECTION C | (Applied Graphics - Long Questions) |

- SECTION A**
- Four questions are presented.
 - Answer **any three** on the accompanying A3 examination paper.
 - All questions in Section A carry **20 marks** each.

- SECTION B**
- and**
- SECTION C**
- Eight questions are presented.
 - Answer **any two** on drawing paper.
 - All questions in Section B and Section C carry **60 marks** each.

General Instructions:

- *Construction lines must be shown on all solutions.*
- *The graphics presented are not necessarily drawn to scale and must not be used for scaling purposes.*
- *Write the question number distinctly on the answer paper in Sections B and C.*
- *Work on one side of the drawing paper only.*
- *All dimensions are given in metres or millimetres.*
- *Write your Examination number in the box provided on section A and on all other sheets used.*

SECTION B - Core

Answer **any two** questions from the eight questions presented in **Section B** and **Section C** on drawing paper.

- B-1.** The 3D graphic on the right shows a dog kennel with the door in the open position.

Fig. B-1 below shows an isometric view of a similar kennel.

- (a) Draw the elevation of the kennel looking in the direction of the arrow and project the plan.

- (b) Draw the plan and elevation of the door in the open position as shown.

- (c) Draw the auxiliary elevation of the *kennel*, projected from the plan, which will include the true shape of face A of the door.

Scale 1:1

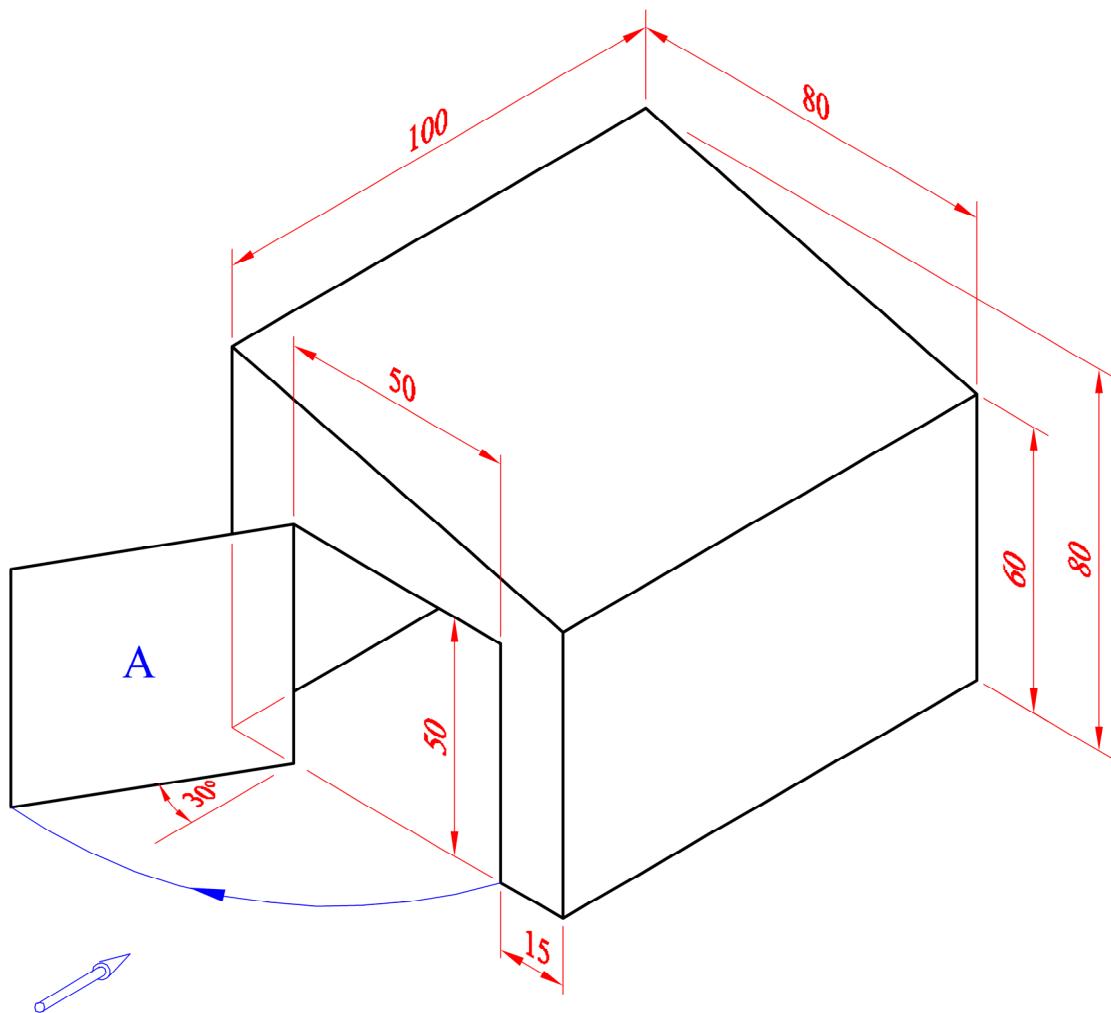

Fig. B-1

B-2. The image on the right shows a lifebuoy and its box.

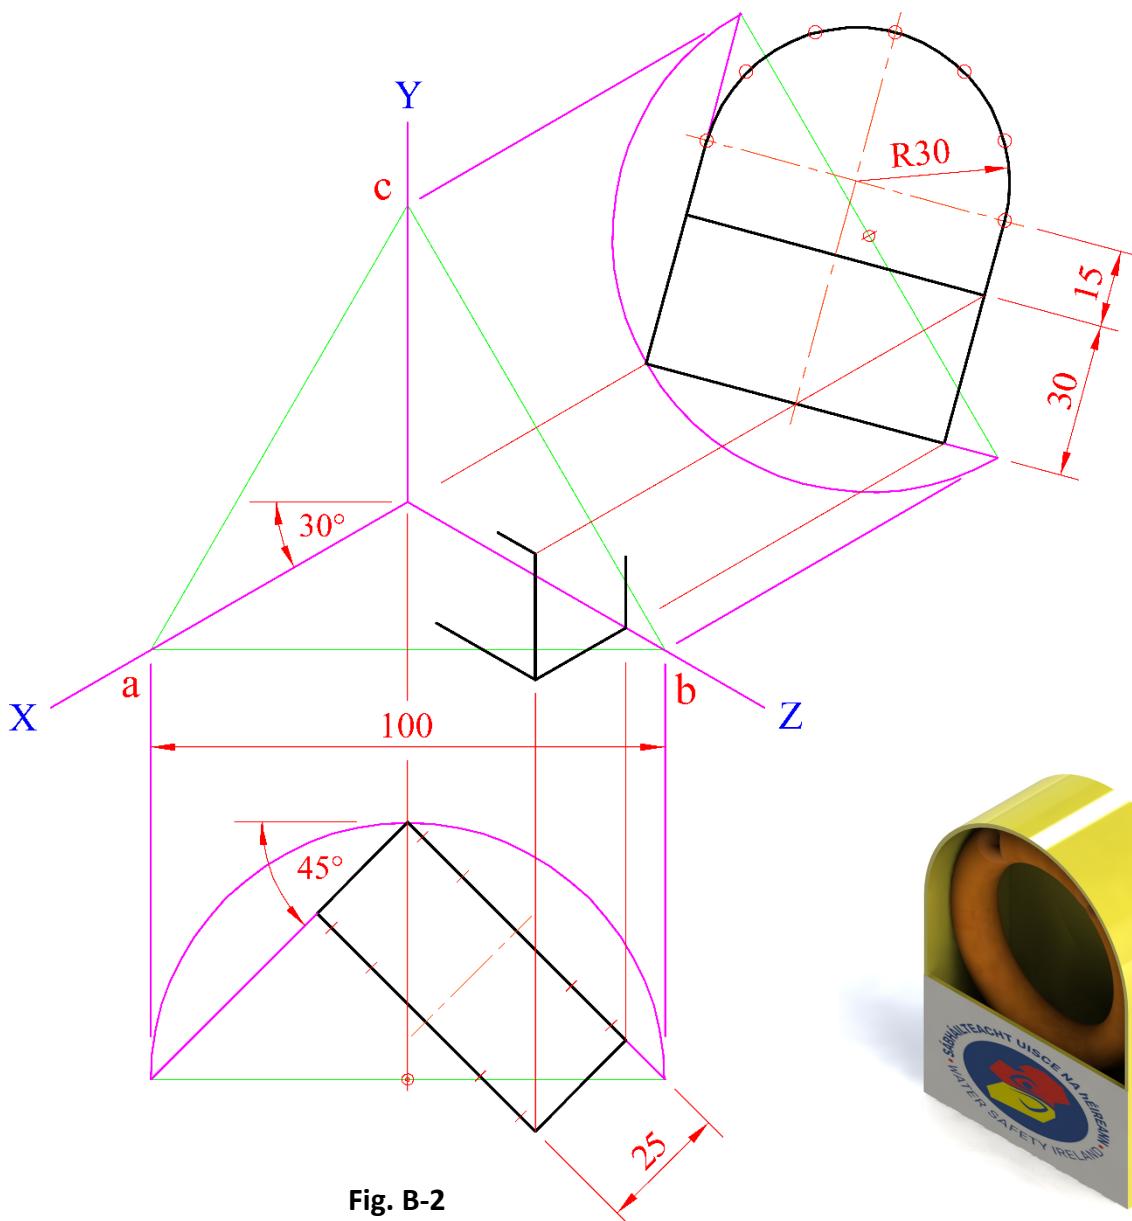

Fig. B-2 below shows the axonometric axes and an incomplete isometric projection of a similar box. A 3D graphic is also given.

The elevation and plan of the box are also shown in their required positions.

- Draw the given equilateral triangle **abc** and the axonometric axes **X**, **Y**, and **Z**.
- Draw the elevation and plan positioned as shown.
- Draw the axonometric projection of the rectangular outline of the lifebuoy box.
- Complete the axonometric projection of the lifebuoy box including the semi-circular top.

Scale 1:1

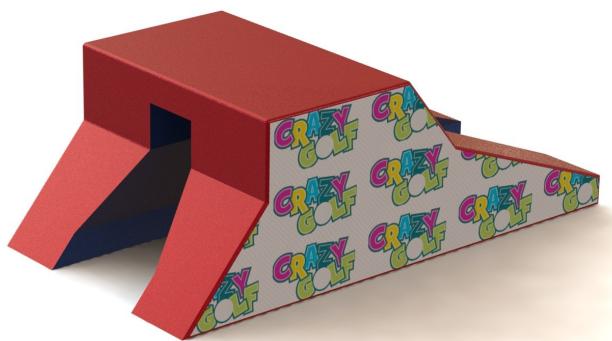

- B-3.** The 3D graphic on the right shows a model of a structure from a crazy-golf park. The design is based on the shape of a car body, through which a tunnel has been created.

Fig. B-3 below shows the elevation and incomplete plan of the structure.

The outline profile of the tunnel is also shown.

- Draw the given elevation and incomplete plan of the structure.
- Complete the plan, showing all lines of interpenetration between the tunnel and **both** ends of the structure.
- Draw an end view of the structure.

Show all hidden detail.

Scale 1:1

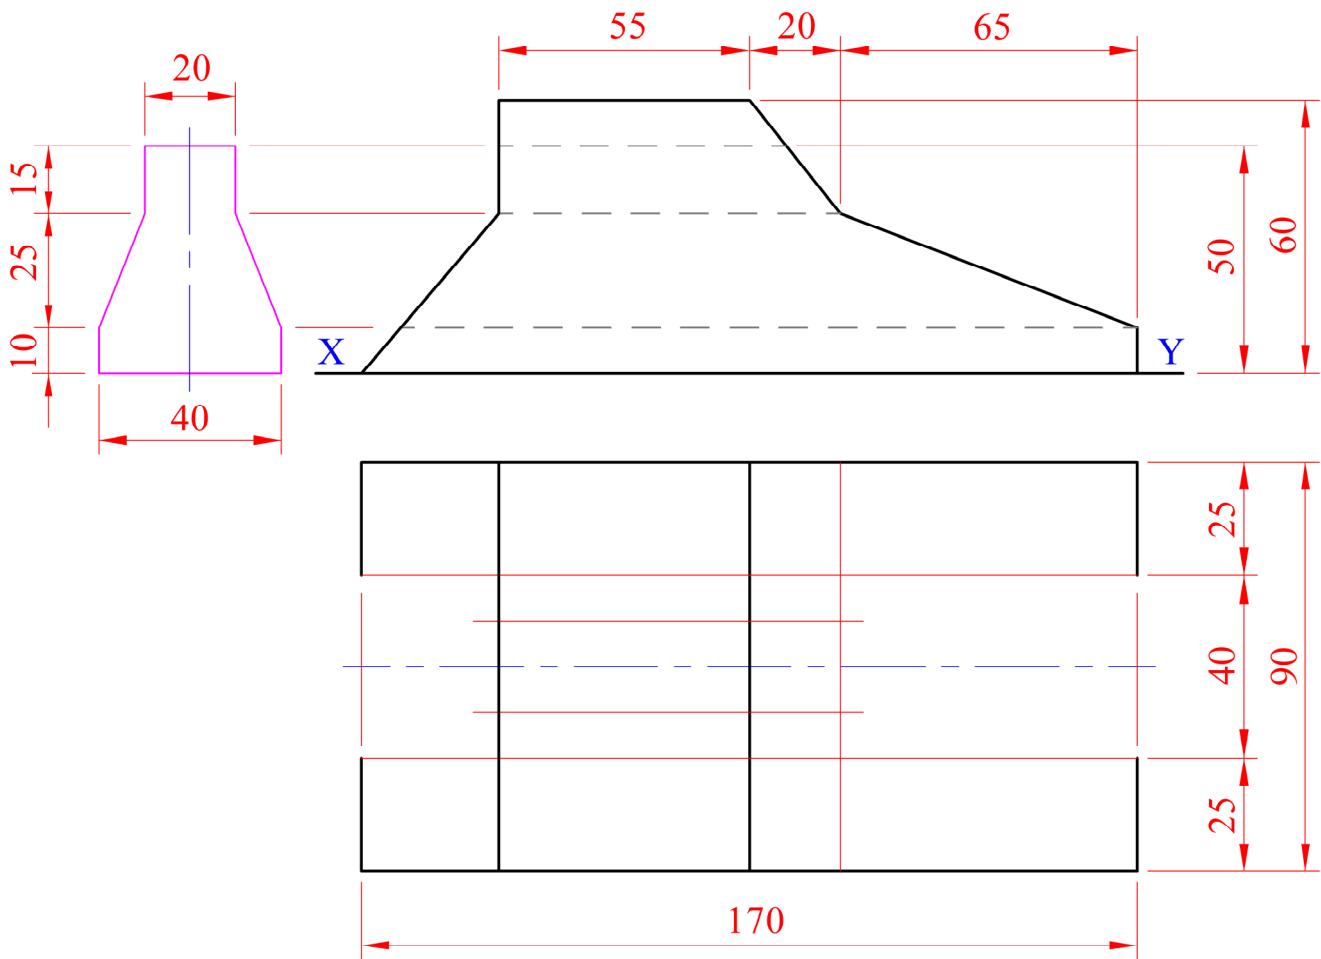

Fig. B-3

SECTION C - Applied Graphics

Answer **any two** questions from the eight questions presented in **Section B** and **Section C** on drawing paper.

Geologic Geometry

- C-1.** The accompanying map, located on the back page of Section A, shows ground contours at five metre vertical intervals.

- (a) On the map supplied, draw a vertical section (profile) on the line **AB**.
- (b) Points **C**, **D** and **E** are outcrop points on the surface of a stratum of ore.
Draw the plan and elevation of the triangle **CDE**.
- (c) Determine the strike and dip of the stratum.

Scale 1:1000

Structural Forms

- C-2.** The image on the right shows a climbing frame from a children's playground. It contains a series of hyperbolic paraboloid surfaces.

Fig. C-2 below shows the projections of a similar hyperbolic paraboloid surface.

- (a) Draw the elevation and plan of the given hyperbolic paraboloid surface.

- (b) Project an end view of the surface.

Scale 1:1

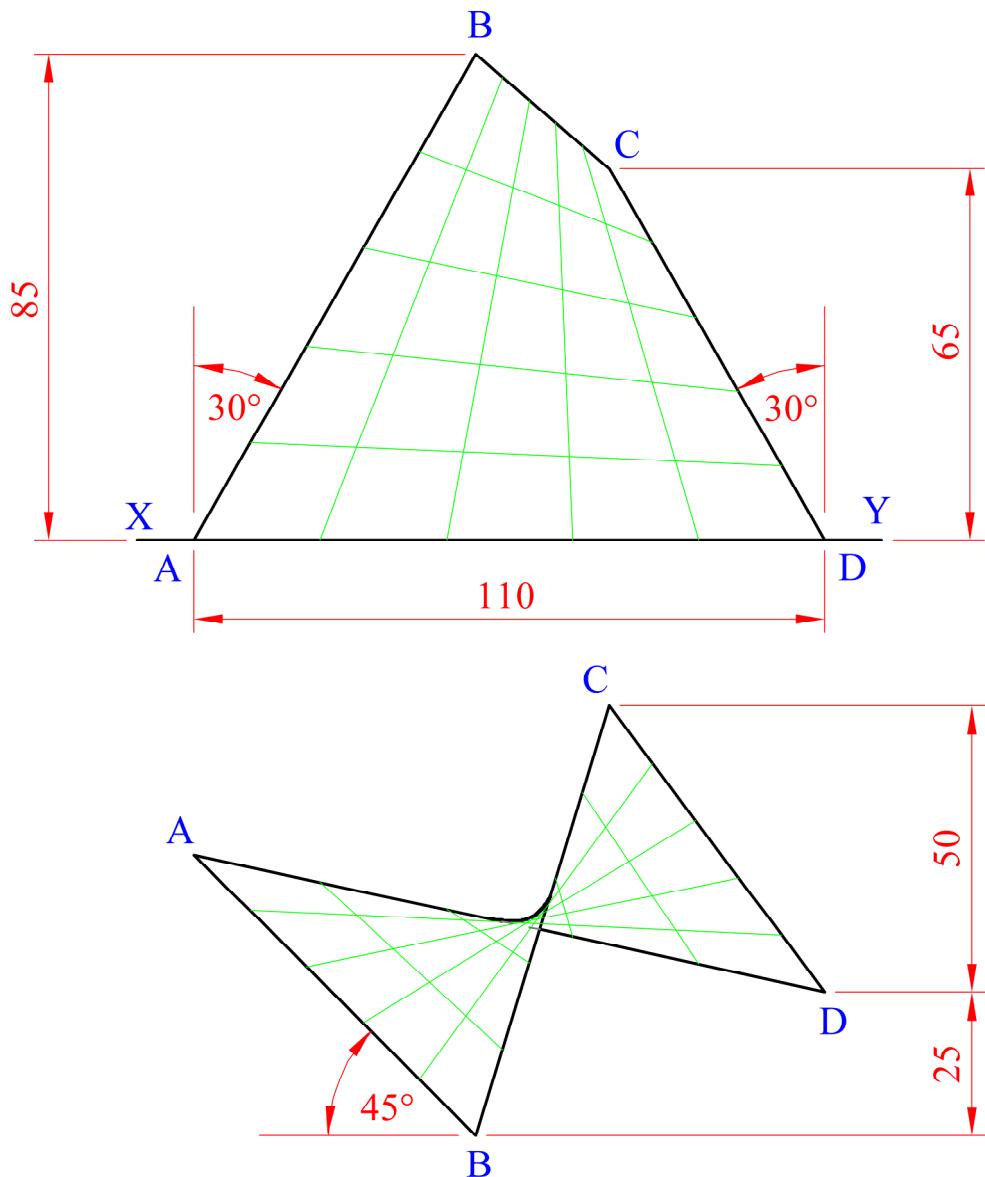

Fig. C-2

Surface Geometry

- C-3. The image on the right shows a 'Magnum' ice cream and a wrapper.

The projections of a similar wrapper are shown in Fig. C-3 below.

- Draw the given elevation and plan of the wrapper. Show clearly how the points of contact are located in the elevation.
- Project an end view of the wrapper.
- Draw a one-piece surface development of the wrapper.

Scale 1:1

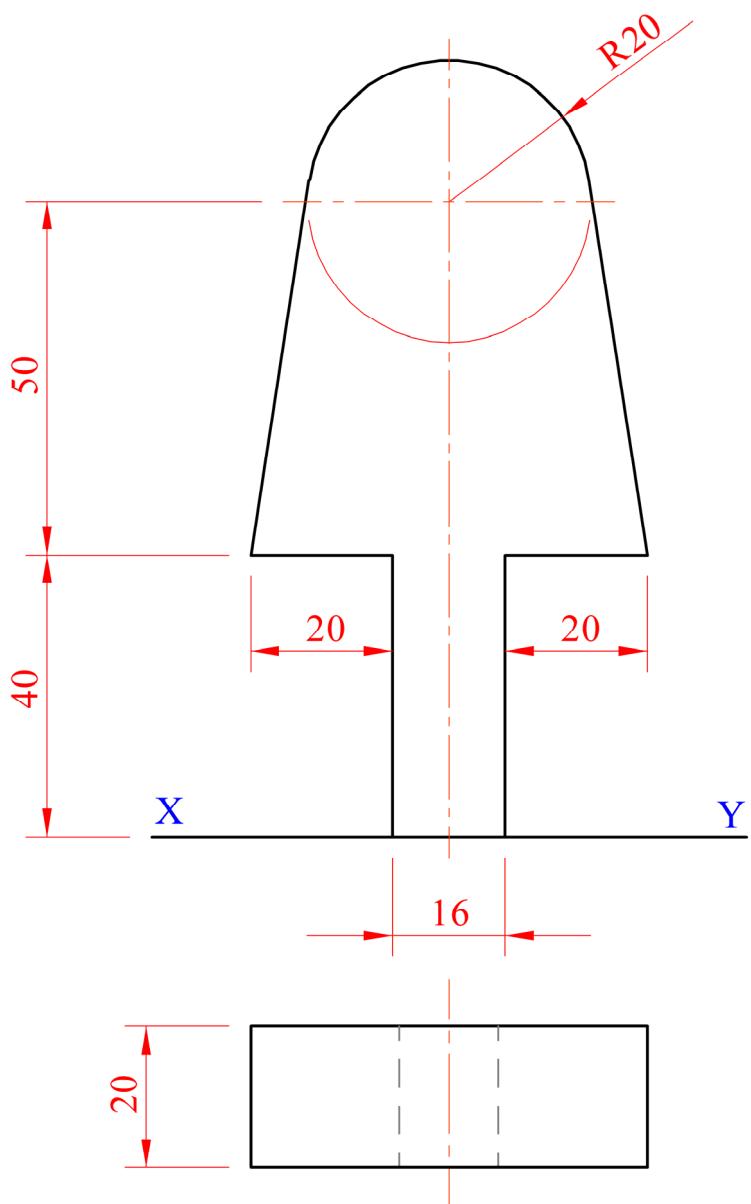

Fig. C-3

Dynamic Mechanisms

C-4. A cam, as shown, is often used as part of a sewing machine.

- (a) Draw the displacement diagram for a cam which imparts the following motion to an inline knife edge follower:

- 0° to 90° Rise 60mm with uniform velocity
- 90° to 180° Dwell
- 180° to 360° Fall 60mm with uniform acceleration and retardation.

(In the displacement diagram, use a distance of 15mm to represent each 30° interval.)

Note: It is not necessary to draw the cam profile.

- (b) The image below shows an enlarged view of the sewing machine mechanism.

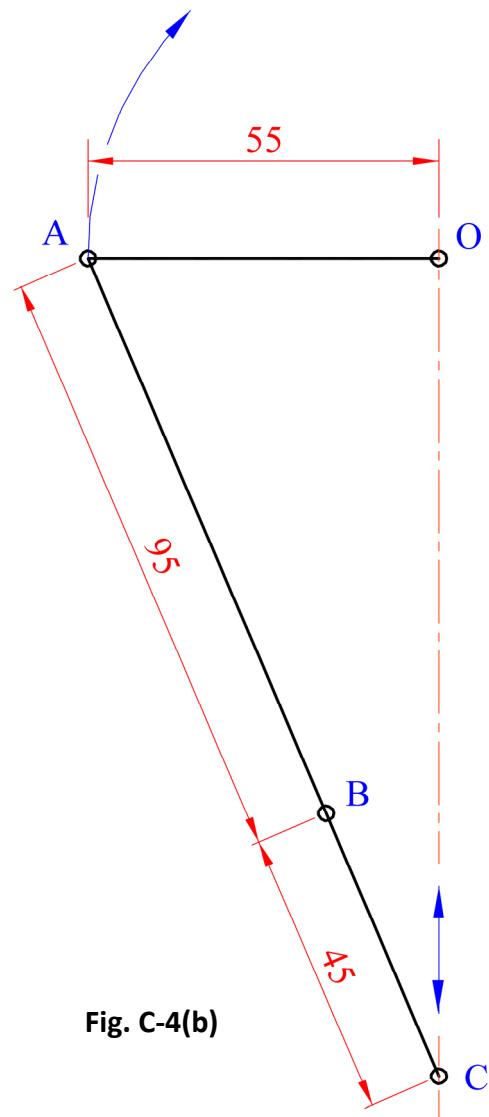

Fig. C-4(b) shows a line diagram of this mechanism.

Crank **OA** and rod **AC** are pin jointed at **A**.
Point **B** is located on the rigid rod **AC** as shown.

Crank **OA** rotates in a clockwise direction, about point **O**, for one revolution. Point **C** moves on the vertical axis as shown.

Plot the locus of point **B** for this movement.

Scale 1:1

Assemblies

C-5. Paint rollers similar to the one shown are used in home decoration.

Details of the paint roller are given in Fig. C-5 below.

A parts list and a 3D graphic of the roller are also shown.

Draw the **sectional elevation A-A** of the assembled paint roller.

(Any omitted dimensions may be estimated.)
