What is the European Mathematical Society?

The learned society of mathematicians from or in Europe.
We interpret both terms broadly: not only pure maths & not only EU.

What do you do?

A lot! We run conferences (from Summer Schools to the European Congress). We publish, we campaign, and we support colleagues in difficult situations. We also lobby, so that our subject's voice is heard loudly in the political arena.

Are you trying to replace national/regional societies?

Definitely not, but local societies have many common interests. The EMS is a way for mathematicians across Europe to come together. Most such societies are corporate members of the EMS, as are many Research Institutes & University Departments.

Why should I join?

- To add your voice to the European mathematical community .
- To support European mathematical events.
- To show solidarity with colleagues in difficult circumstances.
- To help us lobby for mathematics in the political sphere.
- Membership is free for 3 years for students!

Ok, but what can the EMS do for me?

- Reduced registration fees for European Congresses and regular EMS co-sponsored meetings around Europe.
- Free access to Zentralblatt MATH.
- Online access to the Journal of the EMS (JEMS).
- Discounts on books & journals from the EMS Publishing House.
- Reciprocity memberships for the American, Australian, Japanese, and Canadian Mathematical Societies.
- EMS Newsletter, published 4 times a year.
- Communications keeping you updated with international news.
